YAVAR KHAN

AI Engineer | Claude Certified Architect - Professional
San Jose, CA | (669) 339-8555 | yavarkhan1997@gmail.com | LinkedIn | GitHub

EDUCATION

M.S. Computer Science (AI/ML), University at Buffalo, SUNY | GPA 3.87/4.0| **Aug 2024 - Dec 2025**
B.Tech. Information Technology, Amity University, India **Jul 2016 - May 2020**

EXPERIENCE

Aerveil | San Jose, CA **Mar 2026 – Present**
AI Engineer (first engineer, pre-seed agtech startup)
• Built an end-to-end vineyard decision engine for frost protection and spray timing, issuing per-block calls on high-stakes crop decisions.
• Developed a WhatsApp AI agent on the Anthropic Python SDK and Twilio, answering from tenant-isolated tool calls over each block's forecasts, records and past decisions.
• Re-architected decisions from LLM-led to deterministic, with grounded Claude narration and LLM-as-judge eval gates in CI, eliminating ~15% unstable refusals, cutting spray and frost LLM spend by 96%.
• Engineered NOAA weather ingestion pipelines, Claude-based pesticide label extraction with human review, and auditable partitioned Postgres/PostGIS decision history on GCP.
• Partnered with a 26-acre, 6-block vineyard from demo to onboarding, evolving spray windows from weather-only to product-specific based on their feedback.

Accenture | Pune, India **Dec 2020 – Aug 2023**
Software Engineering Analyst (2022 – 2023) | *Software Engineering Associate (2020 - 2022)*
• Operated 120+ OAuth 2.0 APIs on Apigee and AWS for a Fortune 500 pharma client, serving millions of requests/month at 99.9% uptime.
• Cut API error rate from 25% to under 1% in 3 months, tracing failures to endpoints and client apps and hotfixing timeouts and bad redirects.
• Automated a ~1-week manual audit with a Python script that pulled 6 months of per-API-key traffic from Apigee analytics and flagged unused developer apps, leading to 15–20 dead endpoints being retired.
• Deployed 50+ API releases and hotfixes across all environments with Jenkins and Ansible with US, Singapore and Prague teams; trained 5 teammates on the end-to-end release process.

CERTIFICATIONS

Claude Certified Architect - Professional, Anthropic (Oct 2026) | Verify
Claude Certified Architect - Foundations, Anthropic (Jul 2026) | Verify
AWS Certified Cloud Practitioner, Amazon Web Services (2023) | Verify

PROJECTS

WeatherWise.AI | GitHub | Demo
• Built a Claude-powered LangGraph multi-agent weather analyst running parallel tasks across live Vaisala Xweather MCP data, sandboxed code execution and LLM-generated interactive ECharts dashboards
• Implemented multimodal RAG (text, tables, figures) in Pinecone over NOAA, NASA and National Climate Assessment reports; added prompt caching and LangSmith tracing, deployed on GCP Cloud Run via Terraform

Deep Research Pro | GitHub | Demo
• Built a multi-agent research system on the OpenAI Agents SDK: human-reviewed query planning, parallel search agents, adaptive follow-up waves and Pydantic-validated reports
• Delivered ~40-source cited reports in ~1 min via async fan-out and two-tier (in-memory + SQLite) caching; grounded citations in search-tool URL annotations to prevent hallucinated links

SKILLS

AI & LLMs: Claude API, OpenAI Agents SDK, LangGraph, MCP, RAG, Pinecone, LangSmith.
Backend & Data: FastAPI, Pydantic, PostgreSQL/PostGIS, SQLite, Elasticsearch, REST APIs, OAuth 2.0, Next.js.
Cloud & DevOps: GCP, AWS, Terraform, Docker, GitHub Actions, Jenkins, Ansible, Apigee, Claude Code
